Notes: For purposes of this review, we have separated our product into four components:

Website: The millisecond.com web site and tools.
Electronic Docs: Product documentation and help content.
Authoring Tool: Programming environment for creating or customizing psychological tests.
Psychological Tests: Test of cognitive functioning that can be programmed and administered using our software.

Millisecond has designed and tested its Website, Electronic Docs, and Authoring Tool to ensure compliance with accessibility standards.

Millisecond's tools enable customers to program Psychological Tests. Millisecond provides features enabling authors to create accessible tests as appropriate for their research population.

Millisecond also offers off-the-shelf implementations of Psychological Tests that were designed by external scientists and the procedures of which are described and validated in the scientific literature. In these cases, Millisecond replicates the procedures as they have been designed and used by scientists in the industry. Some of these cognitive tests, for example those measuring visual or auditory cognition, may be unsuitable for persons with disabilities.
